SUMMARY

Software Engineer with over 5 years of hands-on experience in the game industry, focused on building reusable gameplay, content, and engineering systems for shipped and cross-platform projects. Strong in C++, C#, Unreal Engine, and Unity, with experience developing gameplay systems, data-driven content workflows, UI, debugging tools, testing frameworks, and maintainable architecture. Skilled in profiling, technical planning, performance optimization, software architecture, and cross-functional collaboration with engineering, design, art, and QA teams.

WORK EXPERIENCE

Game Developer | Swordmonkey Studios | 01/2026 - Present

- Build and refine reusable gameplay systems and components with clean, maintainable architecture.
- Implement game systems based on design goals, technical requirements, and production constraints.
- Contribute to shared architecture and implementation workflows across multiple gameplay areas.
- Communicate progress, technical tradeoffs, blockers, and integration issues clearly across a remote, cross-disciplinary team.

Senior Game Developer | Muslim Kids TV | 09/2024 - 10/2025 | 1y 1mos

- Owned the complete development lifecycle of six released cross-platform games for WebGL, iOS, and Android, including gameplay systems, UI, optimization, testing, and release support.
- Designed and implemented a reusable scenario system that allowed designers to configure dialogue lines, characters, moods, emote animations, and audio through data-driven content files.
- Built reusable gameplay, interaction, scoring, and UI systems across multiple released games.
- Reduced CPU usage by 30% by profiling and optimizing physics, gameplay logic, and runtime performance in Unity.

Unreal Engine Programmer | Byzantian Interactive, Inc. | 05/2024 - 08/2024 | 4mos

- Developed C++ gameplay systems and features for an AAA title targeting Windows and PlayStation using Unreal Engine.
- Implemented Gameplay Ability System (GAS) functionality in C++ for multiplayer combat, with smooth replication across clients.
- Built UI systems for 3D player character customization, integrating player-facing interface flows with Unreal gameplay systems.
- Debugged and refined Unreal Engine gameplay and UI behavior to improve system stability, responsiveness, and player-facing functionality.

Technical Leader | Medrick Game Studio | 01/2023 - 08/2023 | 7mos

- Led a cross-functional team of 8 junior developers and delivered five major game updates through planning, mentorship, code reviews, and technical coordination.
- Broke down large systems and features into clear engineering tasks, improving planning, ownership, and delivery.
- Mentored junior developers through code reviews, pair programming, technical guidance, and engineering best practices.
- Improved team workflows through Agile and Scrum practices, stronger technical coordination, and clearer implementation standards.
- Partnered with designers, artists, and QA to deliver large features in a stable, maintainable way.

Senior Game Developer | Medrick Game Studio | 06/2021 – 01/2023 | 1y 7mos

- Designed and developed a reusable chat system used across multiple games and teams, supporting social features that contributed to a 20% increase in user engagement.
- Built a testing framework using Edit Mode, Play Mode, and unit tests to improve reliability and support stable releases.
- Engineered performance-critical multithreaded systems to improve runtime responsiveness.
- Applied SOLID, OOP, and clean architecture principles to keep shared systems maintainable and easier to extend.

Game Developer | Medrick Game Studio | 08/2020 – 06/2021 | 10mos

- Developed foundational gameplay systems and features that contributed to three successful product launches.
- Built an in-game debugging system that improved issue diagnosis, QA workflows, and release stability.
- Collaborated with designers, artists, and QA to implement, test, and polish player-facing game systems.

SKILLS

- **Programming Languages:** C++, C#, Python
- **Game Engines:** Unreal Engine, Unity, Godot
- **Debugging & Optimization:** Unity Profiler, Profiling, Performance Investigation, Debugging Tools, Root Cause Analysis, Automated Testing, Troubleshooting
- **Software Architecture & Practices:** OOP, SOLID, MVC, MVP, ECS, MVVM, Design Patterns, Clean Code, Technical Documentation
- **Workflow & Collaboration:** Git, GitHub, Trello, Fork, SourceTree, Agile, Scrum, Code Reviews, Task Tracking, Cross-Disciplinary Collaboration

EDUCATION

- **Graduate Coursework in Computer Science**
University of Alberta | 09/2023 – 05/2024
- **Bachelor of Engineering in Computer Engineering**
University of Tehran | 09/2017 – 02/2022
Final Project: Developed 9 interactive games using Unity 3D and C#
Awards: Finalist for Best Undergraduate Project.

PERSONAL PROJECTS

3D FPS Horror/Comedy Game Unreal Engine (C++/Blueprint) | Present

- Developing a first-person horror/comedy game prototype in Unreal Engine.
- Implementing gameplay systems and core mechanics using C++ with Blueprint integration.
- Building reusable systems and iterating on gameplay feel, interactions, and UI.
